

CompuBrain Modelled Data Backup System

Data Backup System | Password Management System | Digital Signatures and SSL Certificates | Data Recovery System | Safe and Secure Data | CompuBrain Certified Network | Computer Users' Code of Conduct | Website and Email Security

In terms of IT, the term back up refers to making copies of the data, which in the event of data loss can be restored and information can be retrieved from the copy of the data. The events that can cause data loss are sudden crash of the hard drive, virus attack or corruption of data. Data loss is very common phenomenon and about 70% of internet users suffer from serious data loss.

We at CompuBrainTM provide a reliable backup system to copy all the data that is worth saving and make a copy of the data in our vast, reliable, secure and easily accessible servers. This helps our clients retrieve their critical data in case of their data loss due to any reason. Our data repository models are efficient enough to serve the clients needs' for data storage and recovery system.

CompuBrainTM deploys different techniques to optimize the backup procedure for dealing with open files and live data sources as well as compression, encryption, and de-duplication, among others. Our dedicated servers, team and procedure will ensure that your data is secure at all times and retrievable at any time.
