

Website and Email Security and all about Web Mails

Website and Email Security | Data Backup System | Password Management System | Digital Signatures and SSL Certificates | Data Recovery System | Safe and Secure Data | CompuBrain Certified Network | Computer Users' Code of Conduct

Emerging online threats, hackers, viruses or disgruntled competitors, the online world is no longer immune from these dangers. CompuBrainTM understands and takes these challenges very effectively for our clients and enables them and their websites with solid and layered protective measures. Across all the industries, there are various ways in which an online content can be attacked, stole or manipulated. CompuBrainTM recognizes these ways, specific to industries, and helps its clients protect their website.

Spurious emails that are sent from your account to your contacts and take your friends, family and associates by surprise. This shows that your email account has been hacked or attacked by a virus. CompuBrainTM has a solution for this as well. We make your email accounts secure and safe from all the attacks and situations that can damage your or company's credibility. With secure protocols and enhanced security features, our email security plans will ensure that your accounts are as safe as a bank vault.

Web mails are the most popular instruments today may it be for official communication, data sharing or friends who wish to stay in touch. The concept of mail is very ancient starting from the days monarchs used birds and messengers to the present age of electronic and web based email which are sent instantaneously to the receiver. Many website today provide email facility with a fixed amount of storage and many yet different features to aid and beautify the mailing experience.
